

DATA VISUALIZATION

Introduction

INTRODUCTION

TYPES OF VISUALIZATION - EXPLORATORY – LOOK AT THE DATA FROM VARIOUS PERCEPTIONS

EXPLANATORY – FIRST FIND OUT WHO IS THE AUDIENCE AND CREATE VISUALS ACCORDINGLY.

VISUAL ANALYTICS (1/2)

- Understand Cognitive perception
 - Leverage strengths of our brain
- Eliminate visual clutter
 - Focus on the business insight
- Choose appropriate display mechanism
 - Graph types to match the message
- Design dashboards
 - Solve business question easily

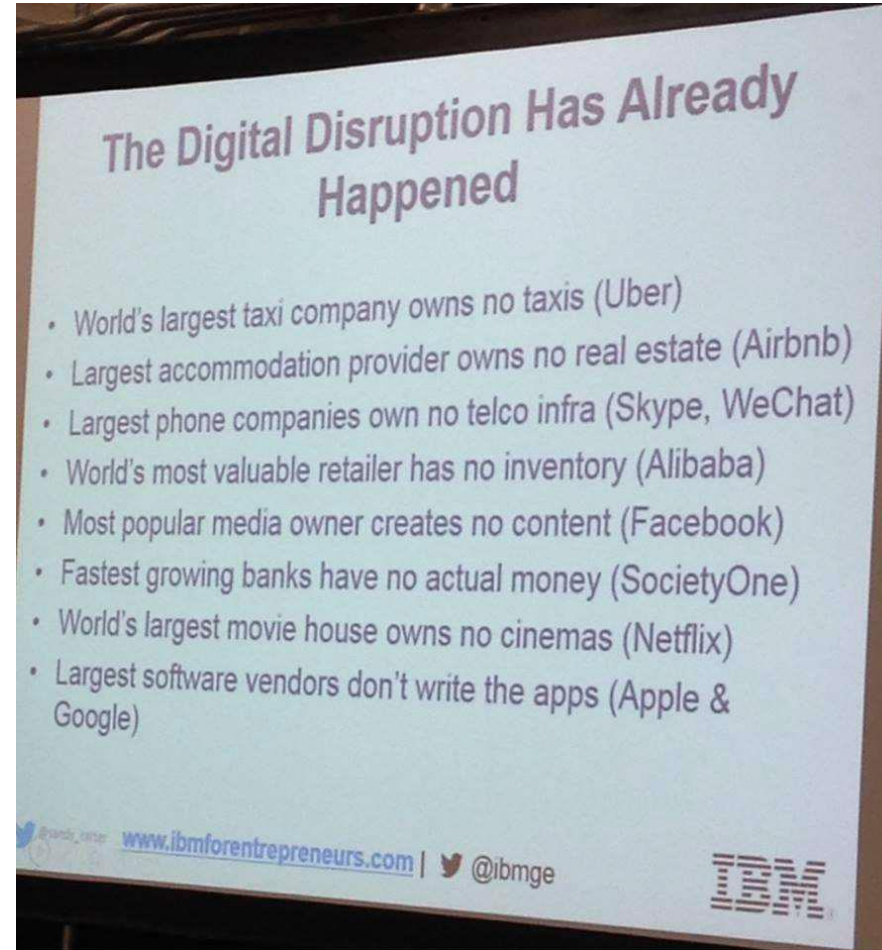

VISUAL ANALYTICS (2/2)

- Explore visually
 - Systematic process to generate insights
- Analyze visually
 - Techniques to extract meaning from large data sets
- Create storyboards
 - Transform complex data into information

DOMAINS AND THEIR DESCRIPTIONS

FUNCTION	DESCRIPTION	EXEMPLARS
Supply chain	Simulate and optimize supply chain flows; reduce inventory and stock-outs.	Dell, Wal-Mart, Amazon
Customer selection, loyalty, and service	Identify customers with the greatest profit potential; increase likelihood that they will want the product or service offering; retain their loyalty.	Harrah's, Capital One, Barclays
Pricing	Identify the price that will maximize yield, or profit.	Progressive, Marriott
Human capital	Select the best employees for particular tasks or jobs, at particular compensation levels.	New England Patriots, Oakland A's, Boston Red Sox
Product and service quality	Detect quality problems early and minimize them.	Honda, Intel
Financial performance	Better understand the drivers of financial performance and the effects of nonfinancial factors.	MCI, Verizon
Research and development	Improve quality, efficacy, and, where applicable, safety of products and services.	Novartis, Amazon, Yahoo

HARVARD BUSINESS REVIEW • JANUARY 2006

UNDERSTANDING THE PATTERNS IN THE DATA

"It's a non-linear pattern with outliers.....but for some reason I'm very happy with the data."

DATA VISUALIZATION AND INSIGHTS

■ Visualization

- is the representation and presentation of data that exploits our visual perception abilities in order to amplify cognition.

■ Insights

- is the discovery of non-trivial, complex, deep, unexpected or relevant truths about information.

ANALYST... WHO?

Reporting and Visualization tools

Visual Discovery and Story Telling

Statistical/Machine Learning Models

STORY EXAMPLE

Employee Retention Problem

Many Departments are struggling to hold onto employees, despite a huge initiative to improve employee engagement.

Our performance is worse than the industry average.

Employee turnover is a company-wide problem.

The problem is particularly acute at some locations.

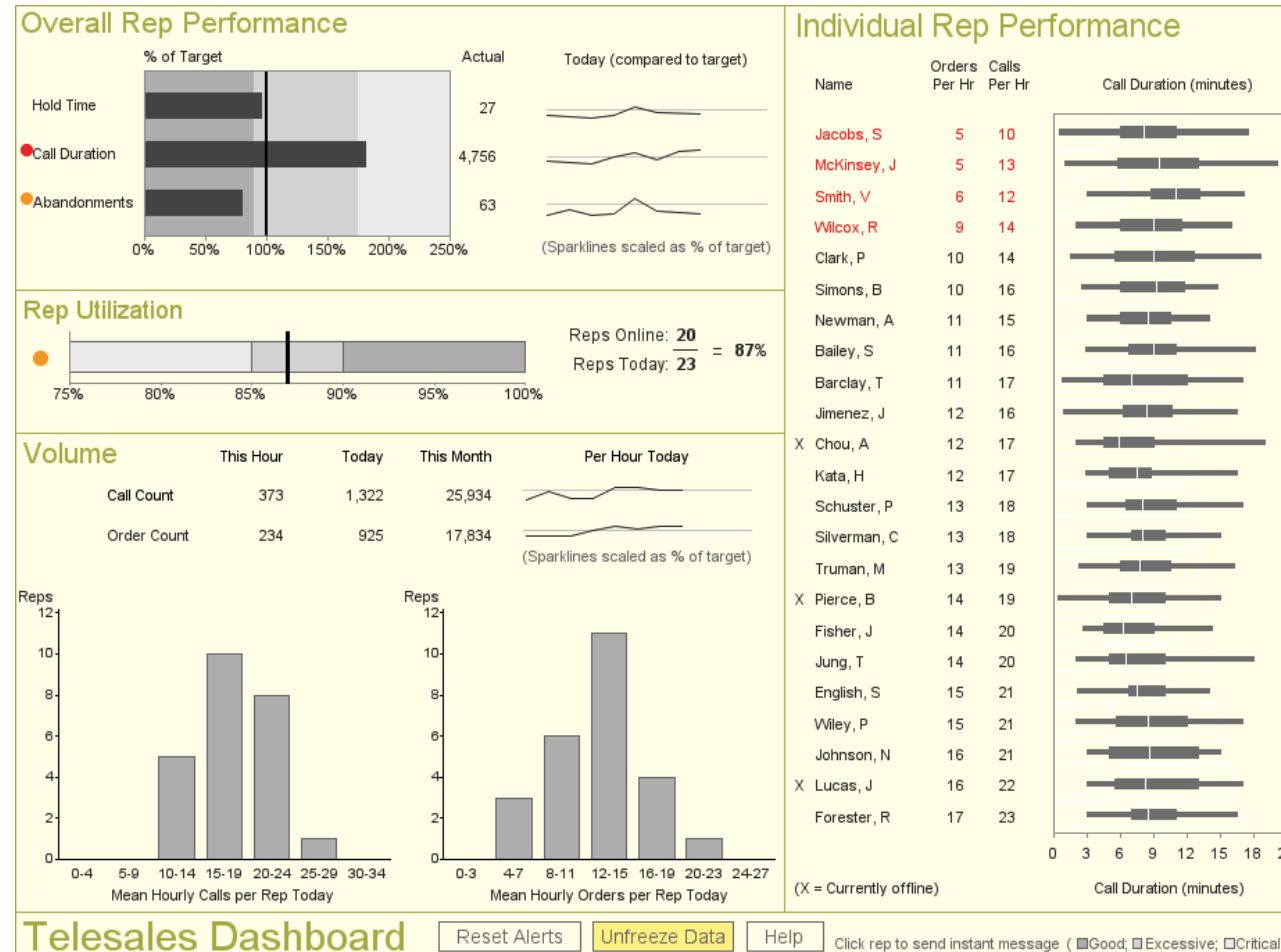

And city-wide, the problem isn't getting better.

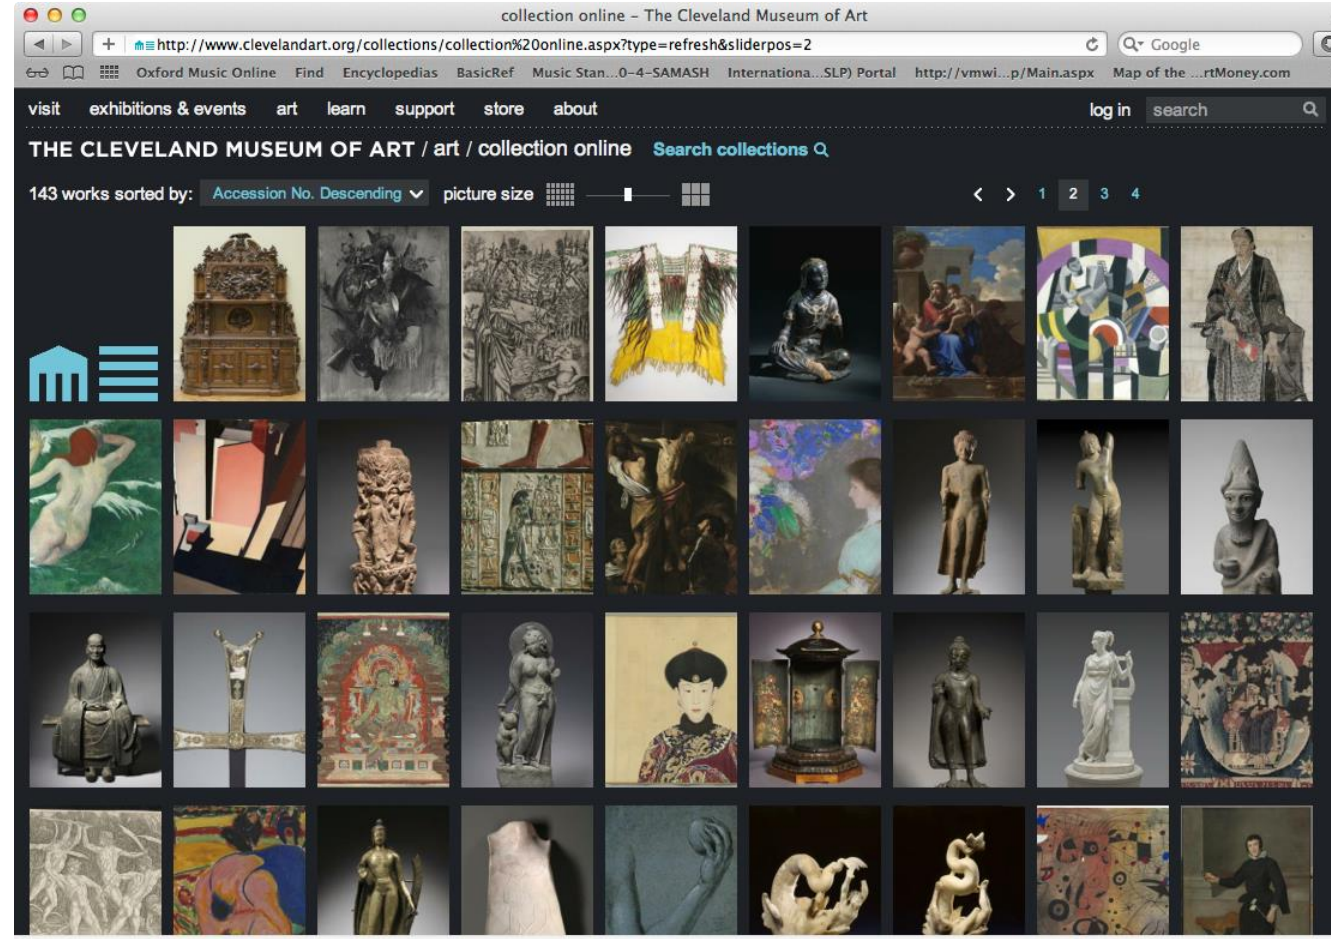

STATISTICAL/ML TECHNIQUES

- The phonemal power of the human mind, according to a research at Cambridge University, it doesn't matter in what order the letters in a word are, the only important thing is that the first and last letter be in the right place. The rest can be a total mess and you can still read it without a problem. This is because the human mind does not read every letter by itself, but the word as a whole. Azanmig huh? yeah and I always tghuhot spelling was important!

5 QUESTIONS TO ASK YOURSELF BEFORE STARTING TO VISUALIZE

- Who is my audience?
- What is the main idea I need to convey to my audience
- What is the story of my report
- Am I using my audience's language
- What output is right for my audience

PRE-ATTENTIVE ATTRIBUTES

- Pre-attentive attributes are those which determine what information captures users' attention.
- Pre-attentive processing occurs without our consciousness at an extremely high speed. It is tuned to detect a specific set of visual attributes.
- There are 4 categories of pre-attentive visual attributes:
 - Form
 - Colour
 - Spatial Position
 - Movement
